

Press Alt + Shift + T to open the terminal.

Type `sudo timedatectl set-timezone Europe/Copenhagen` and press Enter to change the time zone. There isn't any big wow, just a new line. Type `exit` to close the window.

Press Alt + Shift + H to open the maintenance window. Choose the second from top "Päivitä järjestelmä ja konfiguroi blackbox." Sorry these are not translated yet.

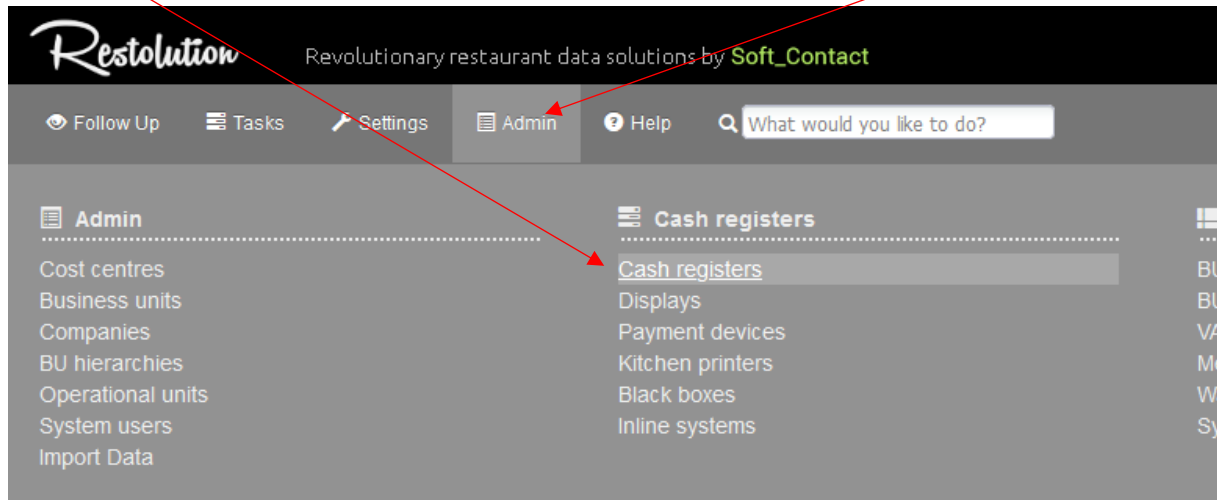

There's no old files to delete because this is a new cash register. Press Enter.

The cash register (cr) updates repositories and then upgrades the installed software. With these 3 first cash registers we did this last Friday manually, so it should not take more than just few minutes.

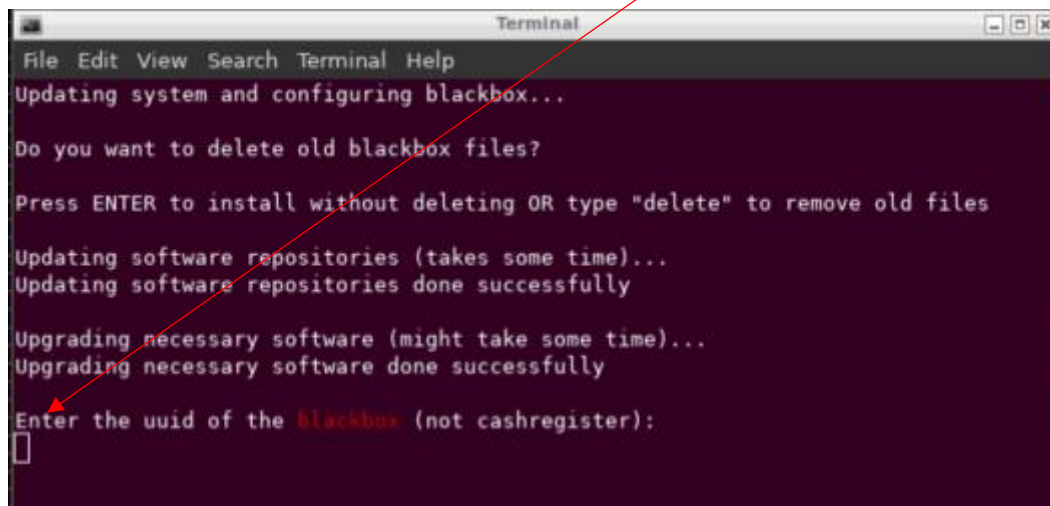

Next you need to give the cr's installation code (uuid). It is found from Restolution Admin -> Cashregisters

The cash register must be created in Restolution before you can install it. At this moment there's only Osterbro's cr. So last time I used that code, but you'll need the code for that specific new cr. So Anna or who ever makes these crs for you in Restolution must do that first.

Search	Black-box	Name	IP address	Type	Machine number	Inline nr	Operational unit	Status	Install code
	Souls Osterbro CR1	@10.0.10.51	Souls Osterbro CR1	10.0.10.51	SP SMALL 1	1	Souls Osterbro	In production	b65d4d1f-2aec-4363-b4d6-ef05e65464e3

You can copy-paste the code from Restolution or type it here. Press (y) to reboot and you're good to go. If you misspelled the code, you will be notified. Try again.

It takes few minutes to upload all data from Restolution, but cash register program should open up automatically.
